SAVA

Top flatbed portable

One of our most popular OHPs has been designed to meet the needs of modern presenters who are highly mobile. Features like easy set up and manipulation, silent cooling system, elegant transportation and perfect picture due to the top optical elements (3-element vario projection lens and condenser), have made **Sava** one of the best selling flatbed portables in many countries under different brand names. In the situation where the lamp burns out a quick lamp-changer instantly enables activation of a spare lamp. A handy case is included in the standard package. It is available in two versions with electronic and classic transformer. The electronic one is lighter and the more suitable of the two in areas with an unstable power supply.
